EXPRESSION OF THE CRYIA(b) GENE IN TRANSGENIC MAIZE USING THE PITH-PREFERRED PROMOTER

Leaf samples from small plantlets transformed with pCIB4433 using procedures described elsewhere were analyzed for the presence of the cryIA(b) protein using ELISA. All plants expressing cryIA(b) were found to be insecticidal in the standard European corn borer bioassay.

Note that the pith-preferred promoter has a low, but detectable level of expression in leaf tissue of maize. Detection of CryIA(b) protein is consistent with this pattern of expression.
